

Sept. 3, 2005

I urge Bonneville Power Administration to support the Transmission Improvements Group proposal. It is the superior proposal on all counts, particularly local control and non-FERC jurisdiction. The worst possible result of this process would be if another group of unelected technocrats, subject to FERC influence, was to control such a vital piece of our regional infrastructure as the electrical grid. The Grid West proposal has virtually no strong support other than the principals involved. Do the right thing.
